**Write the program to check whether
the number is prime or not**

@PYTHONCODE11

CODE

```
n=int(input("Enter Number"))
if n >1:
    for i in range(2,n//2):
        if(n%i)==0:
            print("It is not a prime number")
            break
    else:
        print("It is a prime Number")
elif n==1:
    print("Number is either prime nor composite")
else:
    print("it is not a prime number")
```
