**Write a program to convert the distance (in feet) to inches, yards, and miles.**

@PYTHONCODE11

## CODE

```
d_ft = int(input("Input distance in feet: "))  
d_inches = d_ft*12  
d_yards = d_ft/3.0  
d_miles = d_ft/5280.0  
print("The distance in inches is %i inches."%d_inches)  
print("The distance in yards is %.2f yards."%d_yards)  
print("The distance in miles is %.2f miles."% d_miles)
```
